

What is claimed is:

1. A method for administering supplement feed materials to a horse, comprising:
providing a multiple-sectioned unitary package, a plurality of the package sections each containing supplement feed materials;
administering the supplement feed materials from the package to the horse.
2. The method of claim 1 further comprising filling each of the plurality of package sections with a specified amount of feed material.
3. The method of claim 1 or 2 wherein the plurality of package sections contain distinct feed materials.
4. The method of claim 3 wherein at least one package section contains a supplement containing a vitamin, at least one package section contains a supplement containing a mineral, and at least one package section contains a protein supplement.
5. The method of any one of claims 2 through 4 wherein the package sections are filled with feed materials to within about 5 weight percent or less of a specified amount.
6. The method of any one of claims 2 through 5 wherein the package sections are filled with an amount of feed material that corresponds to a specified horse.
7. The method of any one of claims 1 through 6 wherein the package sections are filled with distinct feed material that have been previously selected for a specified horse.

8. The method of any one of claims 1 through 7 wherein the package contains two sections.

9. The method of any one of claims 1 through 7 wherein the package contains three sections.

10. The method of any one of claims 1 through 7 wherein the package contains four sections.

11. The method of any one of claims 1 through 7 wherein the package contains five sections.

12. The method of any one of claims 1 through 7 wherein the package contains six sections.

13. The method of any one of claims 1 through 12 wherein the package sections are sealed prior to opening the package to administer the feed materials.

14. The method of claim 13 wherein the package sections are substantially sealed from moisture or external atmosphere.

15. The method of any one of claims 1-14 wherein the package is constructed from a flexible material.

16. The method of any one of claims 1-14 wherein the package is substantially rigid.

17. The method of any one of claims 1-14 wherein the package body is rigid and has a substantially flexible top member.

18. A method for administering supplement feed materials to an animal, comprising:

providing a multiple-sectioned unitary package, a plurality of the package sections each containing supplement feed materials;
administering the supplement feed materials from the package to the animal.

19. The method of claim 18 wherein the animal is livestock or a domestic animal.

20. A method for administering supplement feed materials to an animal, comprising:

administering to an animal multiple, distinct supplement feed materials without use of an administration tool.

21. The method of claim 20 wherein the feed materials are contained in a multiple-sectioned unitary package prior to administration to the animal.

22. The method of claim 20 or 21 wherein the animal is a horse.

23. A package system for administering feed materials to a horse, comprising:
positioned at a horse stable, a multiple-sectioned unitary package, a plurality of the package sections each containing equine supplement feed materials.

24. The package system of claim 23 wherein the package contains four or more sections.

25. A package system for administering feed materials to a horse, comprising:
positioned at a horse stable, a unitary package containing a plurality of equine
supplement feed materials, the package substantially machine sealed from moisture or
external atmosphere.

26. The package system of claim 25 wherein the package has been heat
sealed.

27. A method for filling an animal feed material package, comprising:
providing a dispensing apparatus that can dispense solid materials;
dispensing animal feed material from the apparatus into a multiple-sectioned
unitary package.

28. The method of claim 27 wherein equine feed supplement materials are
dispensed into the package.

29. The method of claim 27 or 28 wherein the package is sealed after the feed
materials are dispensed.

30. The method of any one of claims 27 through 29 wherein the feed materials
are dispensed in an automated process from the apparatus.

31. The method of any one of claims 27 through 30 further comprising
administering feed materials from the package to a horse.

32. The method of any one of claims 27 through 31 wherein the package
sections are filled with an amount of feed material that corresponds to a specified horse.

33. The method of any one of claims 27 through 32 wherein a plurality of package sections are each filled with distinct feed materials that have been previously selected for a specified horse.

34. A method for processing orders for packaged animal feed material through at least one communications network, comprising:

over the communications network, a customer placing an order for packaged animal feed material, the customer capable of providing automated input of parameters of the packaged material;

receiving data of ordered feed materials and any parameters thereof over the communications network.

35. The method of claim 34 wherein the customer inputs specified feed materials and amounts thereof to be provided as packaged material.

36. The method of claim 34 or 35 wherein an algorithm is employed to receive and process the inputted data, the algorithm utilizing data pertaining to the animal as inputted by the customer to determine dosage of the feed material.

37. The method of any one of claims 34 through 36 wherein the customer is provided with a total of ingredients contained in the ordered packaged material.

38. The method of any one of claims 34 through 37 wherein the customer is provided with a ratio of minerals contained in the ordered packaged material.

39. The method of any one of claims 34 through 38 wherein the animal is a horse.
